

CITYLAB MILANO · 3 OCTOBER 2026

Claude Impact Lab

Milano

One day to build AI that makes the City's services easier to reach.

Milano Digital Week · with Comune di Milano · Claude Community Italia

THE JOURNEY

Today we build on what you told us in September

9 SEPTEMBER

Claude Conversation

At Fabbrica del Vapore, nine mixed tables answered one question and wrote down where Milan should start.

TODAY · 3 OCTOBER

Claude Impact Lab

Here at CityLab, teams of 4 or 5 people turn those ideas into working prototypes in one day.

AFTER TODAY

Into the City

The code is open source and goes to the Comune. The winners meet the departments that could adopt it.

THE QUESTION

How can AI make the City of Milan's services more accessible?

For people with disabilities, older people, people who don't speak Italian and people with low vision.

Six recurring themes

6/9

A proactive City

Reminders before fines, alerts on deadlines

6/9

One point of access

One place that knows you and sends you to the right desk

5/9

Onboarding newcomers

Students and foreigners: tax code, housing, registry

4/9

A City that learns

Train staff, listen to the people at the counter

3/9

Less bureaucracy

Stuck permits, appointments impossible to find

2/9

Mobility and parking

Permits, area passes, lifts on public transport

Fears they named: privacy and consent, wrong answers, a wider digital divide, losing empathy.

Build on what the City already has

Already there

- Automatic emails for new residents and address changes
- 16 of the 22 most-requested certificates are already online
- A TARI (waste tax) pilot at an advanced stage
- An information path for international students on YesMilano

Still open

- How do we know someone has just arrived?
- Agents need clean data and reliable connectors
- Fragmented systems that don't talk to each other

THE CHALLENGE

Three tracks. Pick one.

01 · Welcome journey

For people arriving in Milan

02 · Assisted procedure

One procedure, from first question to submission

03 · From inside City Hall

Tools for the people at the counter

Welcome journey for people arriving in Milan

For whom. New residents, international students, people who don't speak Italian.

The job. Tax code, residency, housing, waste tax, transport: what to do, in which order, with which City source.

Build on. The City's existing welcome emails and the YesMilano student path.

Claude at work

An agent that talks or chats in the newcomer's language, reasons over City rules and builds their personal checklist.

Watch out

Without identity data it can become a smarter FAQ. Show what data the next version would need.

One procedure, assisted from start to submission

For whom. Citizens and professionals filing with the City.

The job. Pick one frequent procedure (a SCIA, a parking permit, a certificate) and take it apart: fields, attachments, typical errors, reasons for rejection.

Measure it. Time and errors with and without the assistant.

Claude at work

Reads documents and photos, asks only what is missing, pre-fills and checks before submission.

Watch out

A wrong pre-fill falls on the citizen. Claude fills in, the person checks and signs.

From inside City Hall: the people at the counter

For whom. City staff at service desks and back offices, and through them, every citizen they serve.

The job. Repeated questions, manual hand-offs, requests that land in the wrong office.

Why bother. The tables named inertia, culture and missing skills as the biggest brakes. This track works on those directly.

Claude at work

Triages incoming requests, routes them, drafts answers with sources for the officer to approve.

Watch out

The benefit to citizens is indirect. Make it visible in your demo.

TODAY'S MAIN RULE

Claude builds it, and Claude runs it

BUILT WITH CLAUDE

Claude writes your app

With Claude Code, Cowork or Claude Design you can prototype in hours. Every team will do this, so it won't set you apart.

RUNS ON CLAUDE

Claude does the work, every time

When a citizen or an officer uses your solution, Claude reads the request, applies the City's rules and fills in or routes what it can. It runs through the API, as an agent or behind an MCP server.

THE TEST

Switch the AI off. What's left?

Track	Runs on Claude	Not enough on its own
01 · Welcome journey	An agent answers in your language and builds your checklist from City sources	A static page of links and FAQs
02 · Assisted procedure	Reads your documents, asks what is missing, pre-fills and checks the form	A nicer-looking form
03 · Inside City Hall	Classifies and routes requests, drafts sourced replies for the officer	A dashboard of request counts

If the right-hand column is all that's left, the solution doesn't run on AI yet.

DATA

Structured or not, Claude can read it

City open data portal

Open datasets with an API, from population to transport to service quality surveys

dati.comune.milano.it/web/portale-del-dato

MilanoStatistica · Linked Open Data

Population, economy and territory statistics, plus semantic data on the city

milanostatistica.comune.milano.it

portalelod.comune.milano.it

Public service pages

How-to pages of the Comune, YesMilano, transport accessibility info. Unstructured, still usable

comune.milano.it · yesmilano.it

What you know

Ask the people in your team, and any City staff in the room, where citizens get stuck

The full catalogue with links is in the repo. Use public data only, and no personal data.

HOUSE RULES

Four rules for the day

01

Teams of 4 or 5

Mix design, code and domain knowledge

02

Open source

On GitHub, donated to the Comune

03

Public data only

No personal data in any prototype

04

One submission

Per team, before 16:00

HOW WE JUDGE • EACH CRITERION 0 TO 5

Impact and AI at work count double

×2 **Day-one impact** Could the City use it tomorrow? Would it make a real difference?

×2 **AI at work** Does Claude do the work while it runs, not only while it was built?

×1 **City data and sources** Does it use the City's data and knowledge in a meaningful way?

×1 **Product and execution** Does it work? Do users get it on the first try?

×1 **Pitch** What it is, for whom, and why it matters, in two minutes

Jury: Riccardo Colombo (Anthropic), Silvia Castellanza and Sara Belli (Comune di Milano)

WHAT TO SUBMIT · BY 16:00

A public repo, a README, and a two-minute demo video

The README must say

- The problem and who has it
- Which track, which City sources
- How to run it and see it work
- Link to the demo video (optional, recommended)

REQUIRED SECTION

Where does Claude work when someone uses this?

Model, prompts, tools or MCP it calls, what it decides and what a human confirms.

TODAY

The day at a glance

Time	What happens
09:00	Doors open, coffee
10:00	Work starts: welcome from the Comune, the brief, teams form
~13:00	Lunch at the tables
16:00	Submission deadline, then pitches · 2 minutes per team
17:00	Jury deliberates
17:30	Awards

FORMING TEAMS • NEXT 15 MINUTES

Join the team working on the idea you care about

1

Write your card

Your name and your skill: design, code or domain

2

Go to a track

Gather around the idea you want to build

3

Balance the team

4 or 5 people, mixed skills, at least one Claude Max plan

FROM ANTHROPIC, TO RUN YOUR SOLUTION

\$100 in Claude API credits, each

1. Sign in at console.anthropic.com and create your organization
2. Copy your **Org ID** from the console. Not your Claude.ai ID: it will be rejected
3. Scan the code and submit it once. One claim per person
4. Create an API key and put it in your app

Use the credits to run your solution and build it with your Claude plan. Each team needs at least one Max plan.

API only · not valid on Claude.ai

EVERYTHING IN ONE PLACE

The Impact Lab repo

github.com/Claude-Milano/impact-lab-oct-2026

The brief

The three tracks, the question, the voices
from 9 September

The data

Catalogue of City sources, with links and
formats

The rules

Schedule, rules and judging criteria

README template

Problem, users, data used, demo, and where
Claude works

Submission

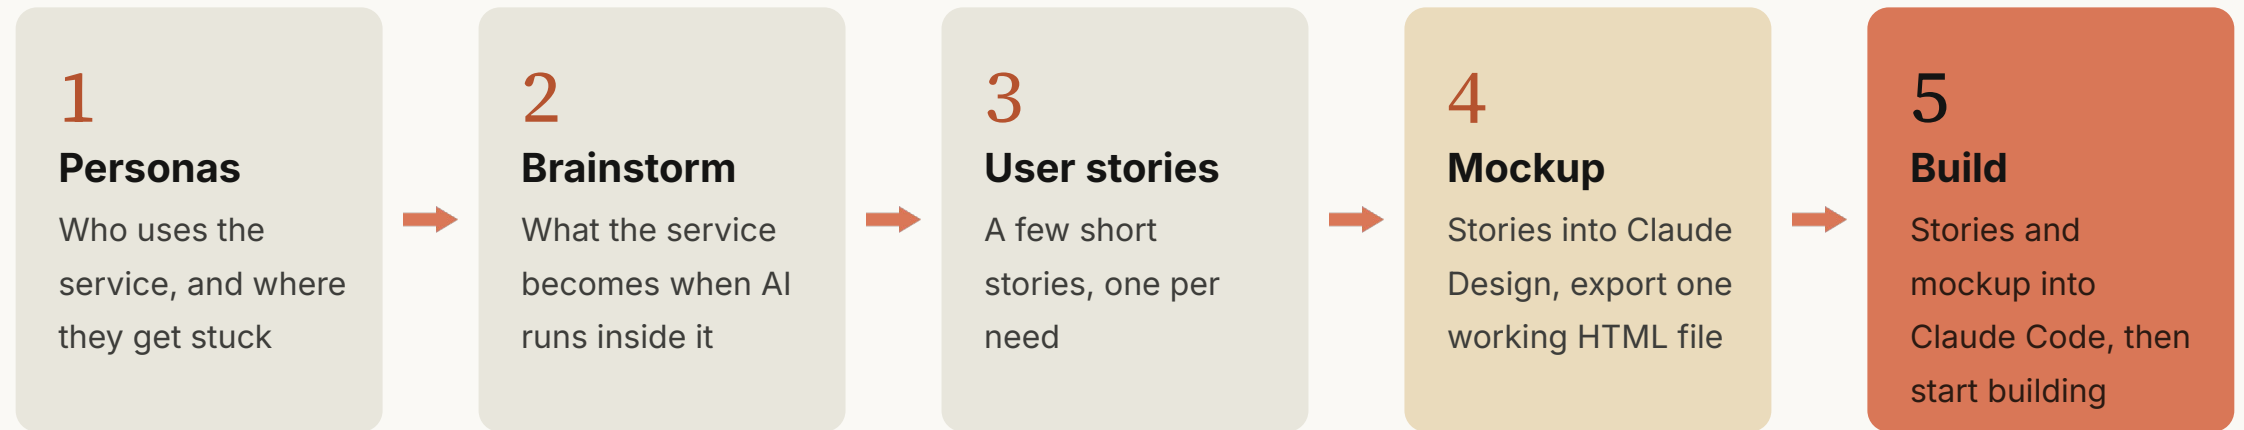

A GitHub issue form, by 16:00

Starter kit

Prompts, a CLAUDE.md and a working "runs
on Claude" example

TIPS · A FLOW THAT WORKS

From people to code in five steps

Steps 1 to 3 can live in one Claude chat. Each step's output becomes the next step's input.

TIPS AND TRICKS

Three ways to get more out of Claude today

Brainstorm in an HTML artifact

Ask Claude for an interactive page that asks you questions one at a time and draws your answers. Use it for personas and for how the service could evolve. Ask it to be very visual.

Use Claude Design twice

First to design the user experience from your user stories. Then again at the end, to build the pitch deck, with video if you have it.

Let Claude make your demo video

With Opus 5.5 in Claude Desktop or Claude Code, point it at your repo and ask for a two-minute video. Add the docs that explain what you built, not just the code.

Go build.

Build something the City could switch on tomorrow, with Claude doing the work inside it.

If you get stuck, raise a hand. The staff will be walking the tables all day.
